

Synergies between Roman and other surveys: the case of microlensing

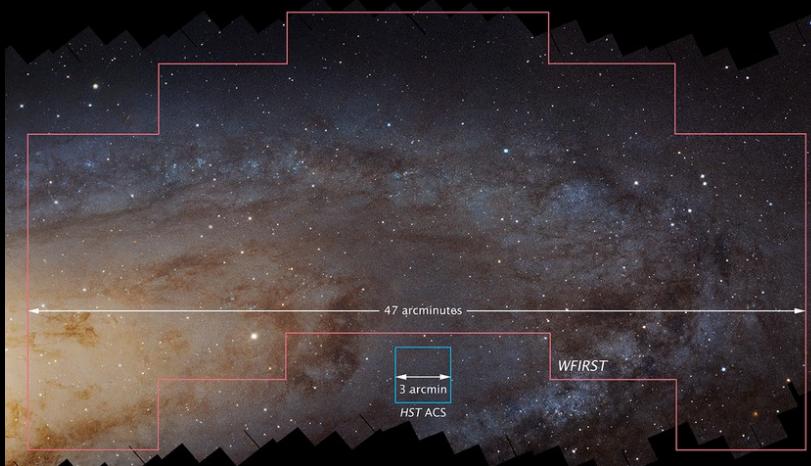

Etienne Bachelet

Roman microlensing survey

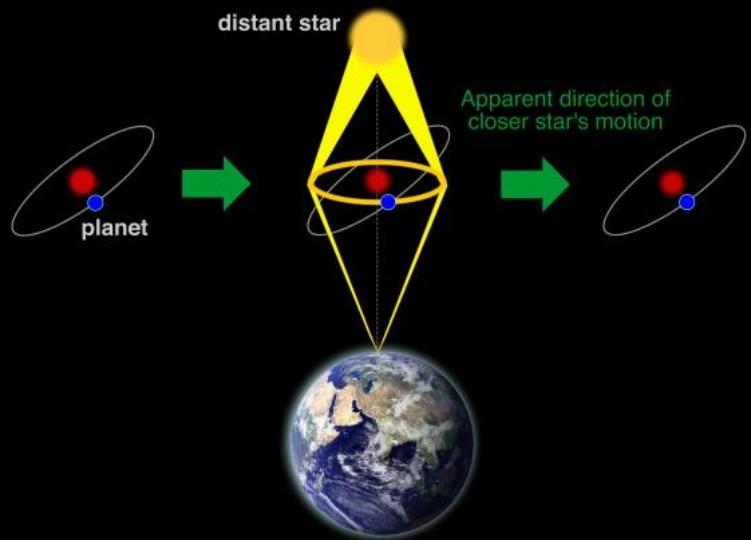

Penny et al. 2019, ApJS

- 5 yrs of ~70 d survey of the Bulge
- > 1400 cold planets
- sensitive to all host types
- hundreds of free-floating planets

Microlensing in a nutshell

If there is a planet orbiting the closer star, and it happens to align with the Einstein ring, its mass will enhance the lens effect and increase the magnification for a short time

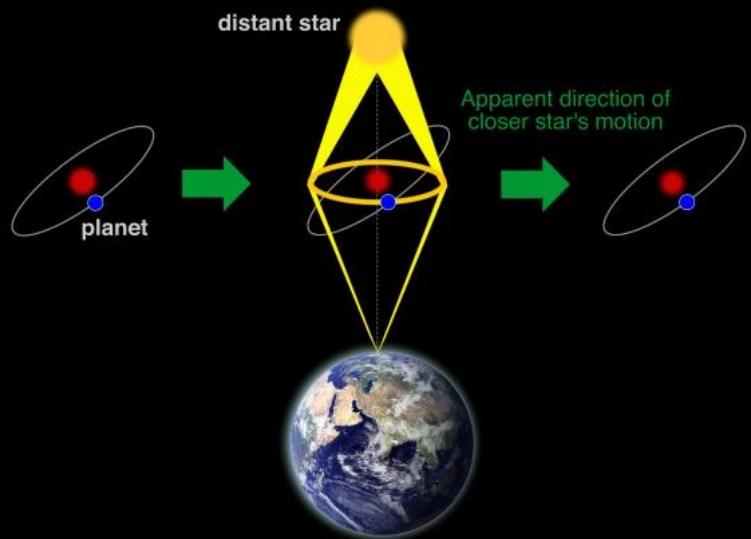

The planet causes a small blip on the graph

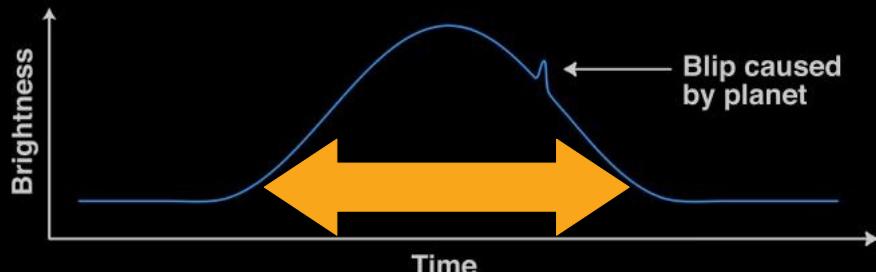

Microlensing in a nutshell

If there is a planet orbiting the closer star, and it happens to align with the Einstein ring, its mass will enhance the lens effect and increase the magnification for a short time

The planet causes a small blip on the graph

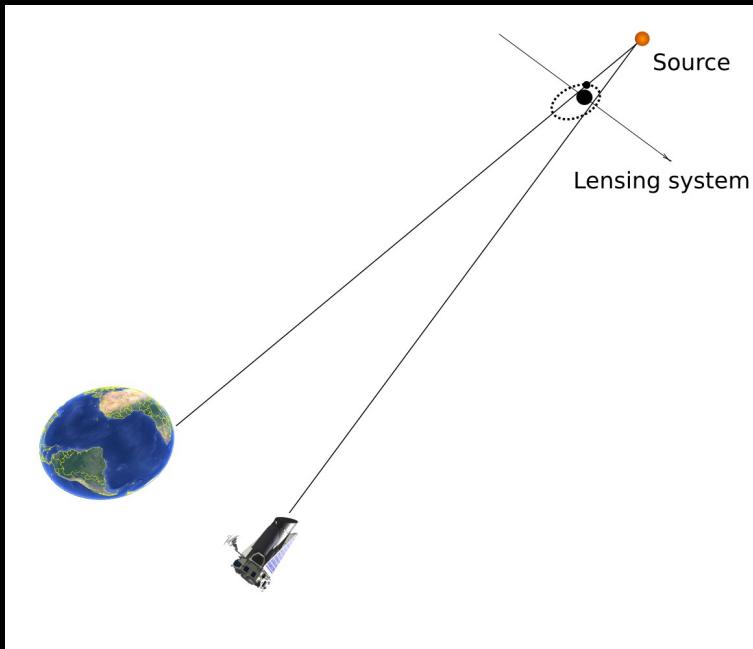

$$2t_E \propto M_I^{0.5}$$

Microlensing challenge: the mass and distance degeneracy

- lens flux and relative proper motion (prior/posterior high resolution imaging)

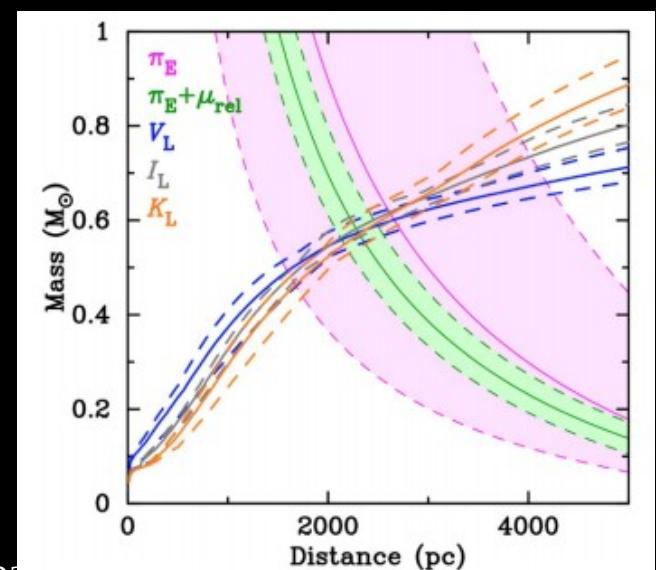

Vandorou et al. 2020, AJ

Microlensing challenge: the mass and distance degeneracy

- lens flux and relative proper motion (prior/posterior high resolution imaging)

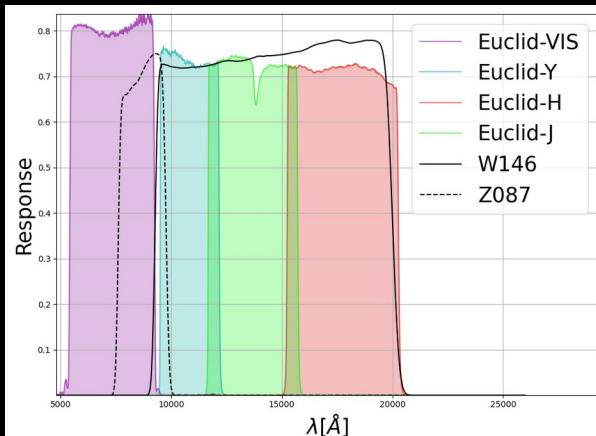

Bhattacharya et al. 2018, AJ

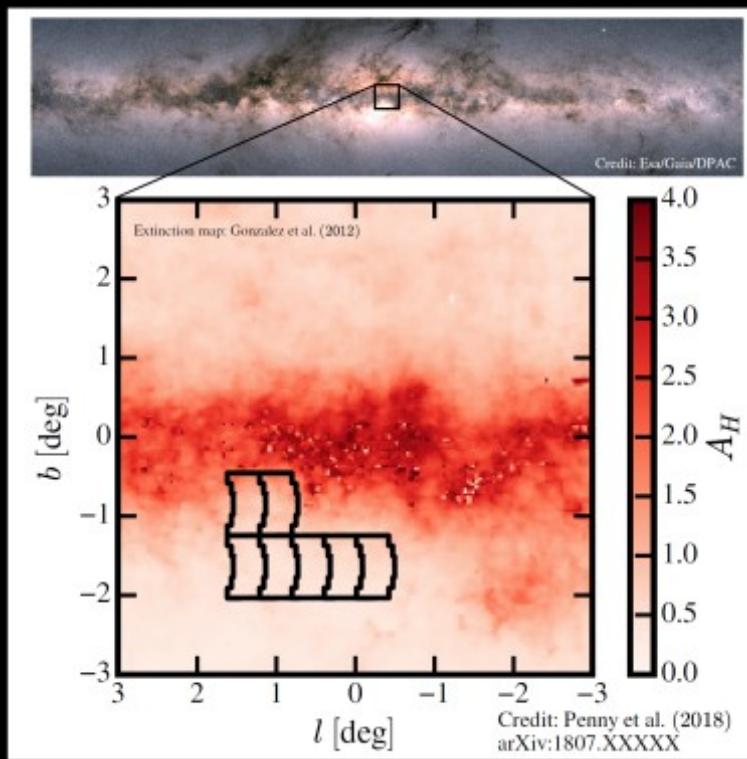

Roman microlensing survey

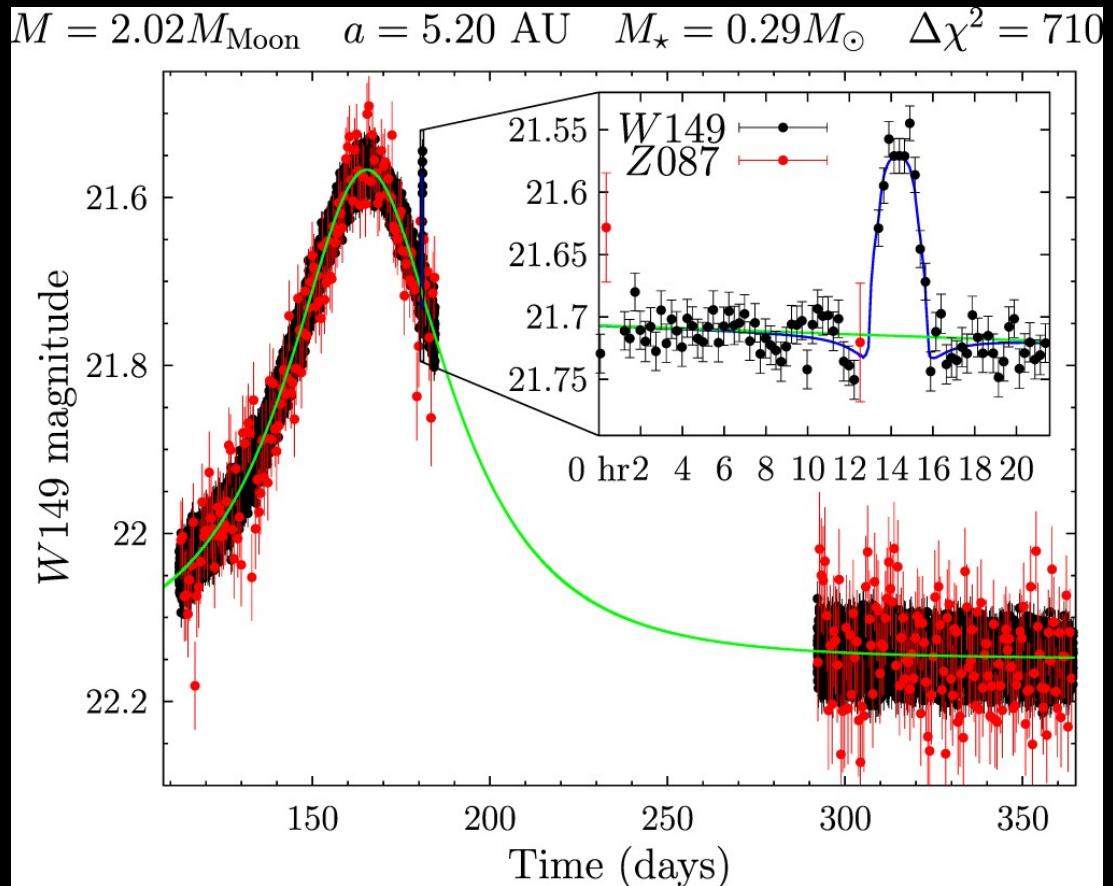

- 7 fields for a total of $\sim 2 \text{ deg}^2$
- Wide W146 filter (ZP W146 ~ 27.6 mag AB)
- 15 minute cadence
- Observations every at least 12 hours in at least one other filter (e.g., Z087, F184), 900 total obs
- 6 x 72 day seasons.
- $\sim 41,000$ exposures in W146
- ~ 432 total days spread over 5-year

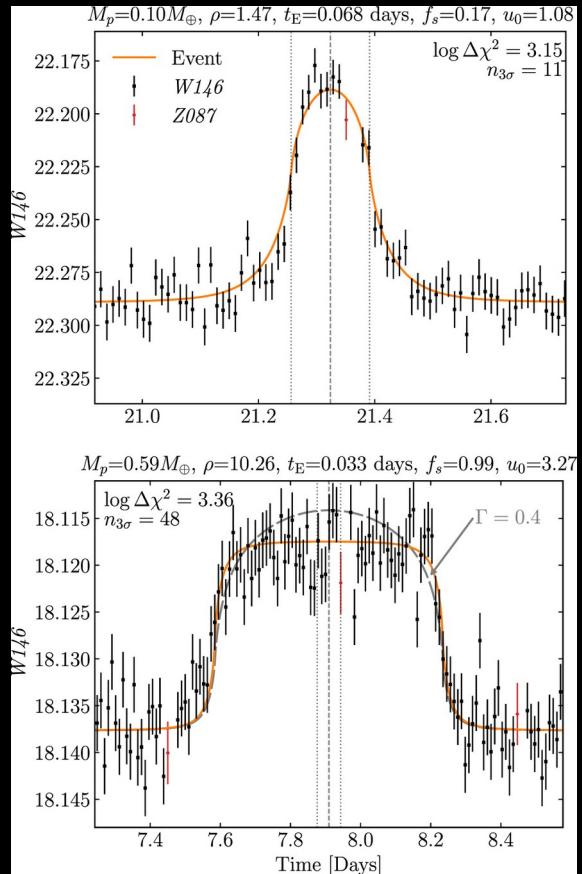

Exploring the Universe with the Nancy Grace Roman Space Telescope

Roman microlensing survey

Penny et al. 2019. APJS

Samson et al. 2020. AJ

Roman microlensing survey

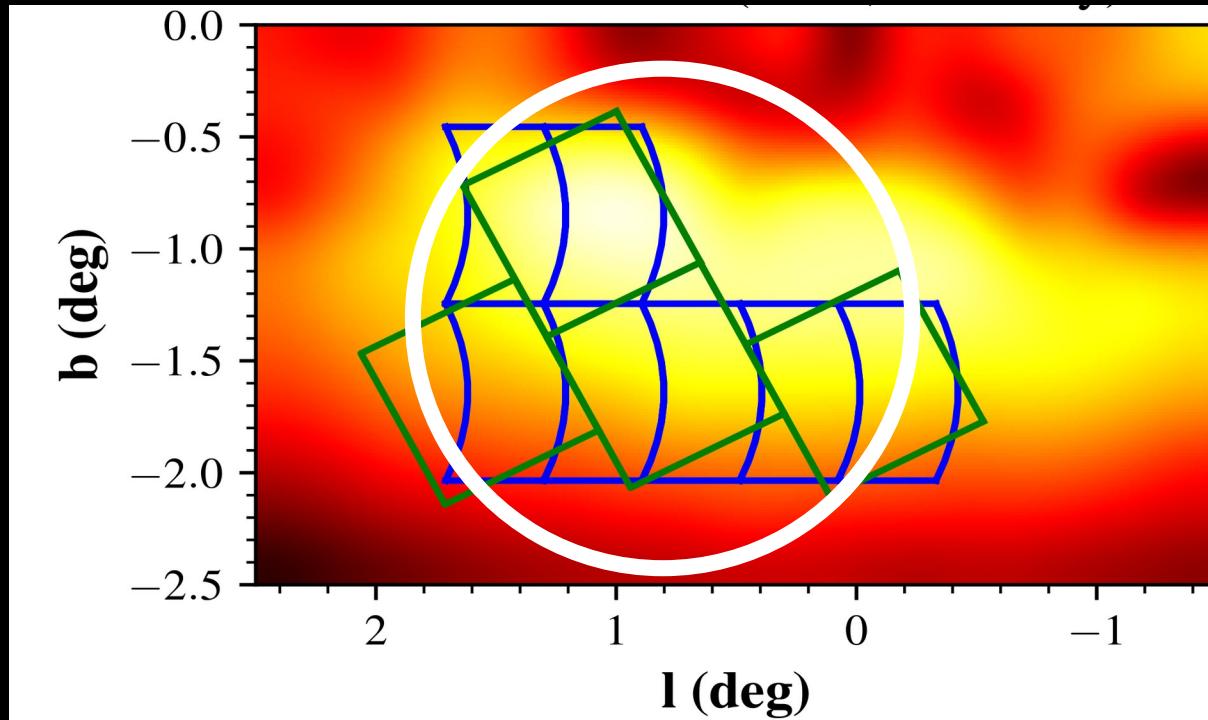

- Microlensing (*Penny et al. 2019, APJS; Samson et al. 2020, AJ*)
 - 30,000 + events
 - 1400 + planets with $M_p > 0.1 M_E$, ~200 with $M_p < 3 M_E$
 - 300 + FFP
 - Binaries, stellar remnants, mass function...
- “Auxiliary” science
 - Transiting planets (~ 10^5 planets, *Montet et al. 2017, PASP*)
 - Asteroseismology of Bulge giants (Gould et al. 2015, JKAS)
 - Extremely KBO searches (Gould et al. 2014, JKAS)
 - More...
- All data ~immediately public

Euclid-Roman Joint Survey

1. Early Euclid survey of Roman fields

Bachelet et al. A&A under review

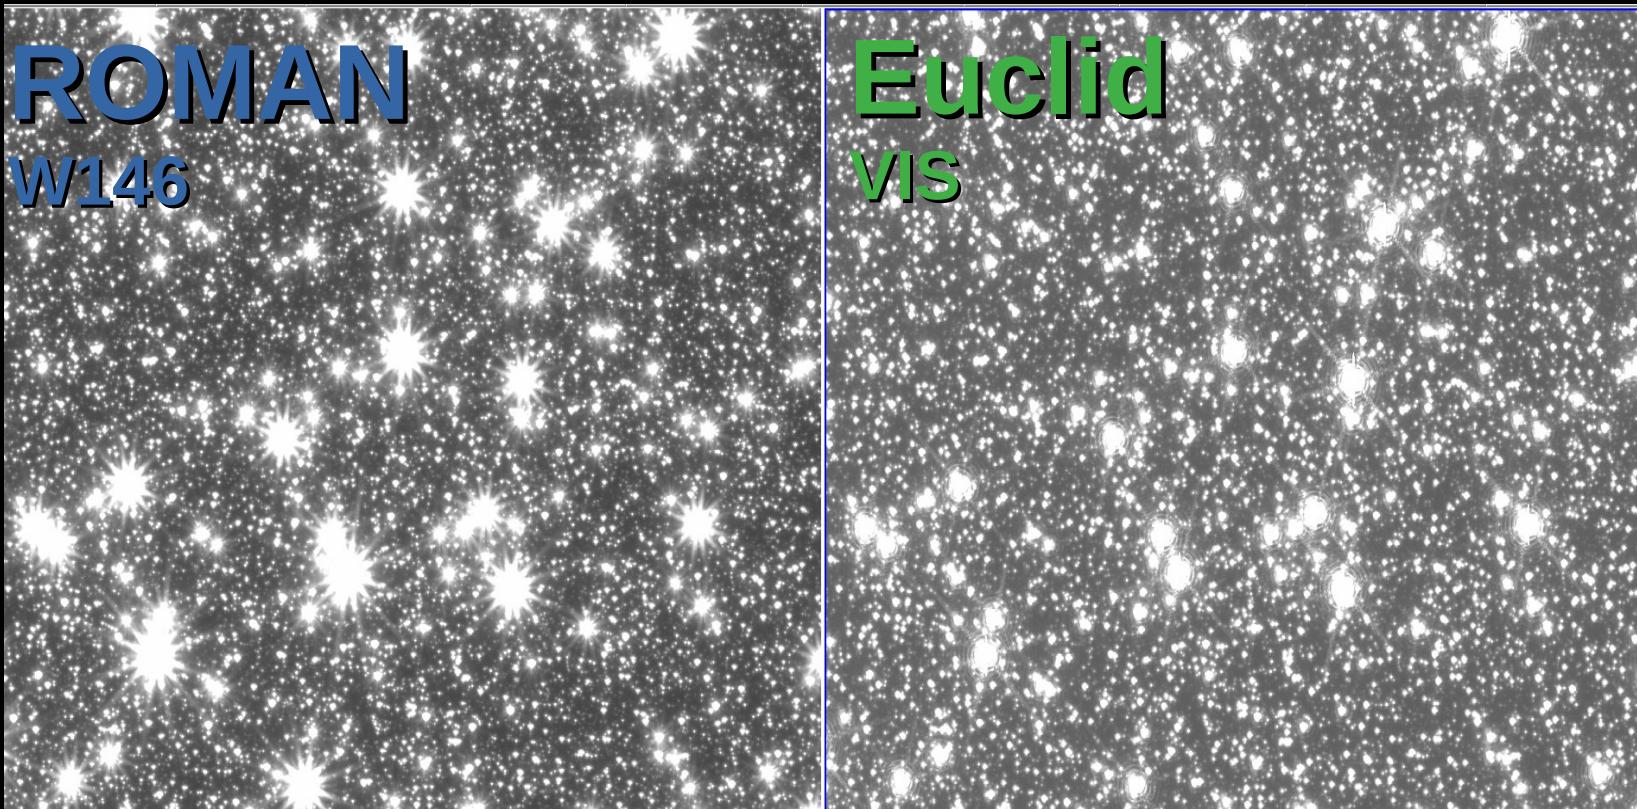

Measurement of proper motions and flux of the sources and lenses

~ 4 pointing of Roman fields x 16 dithering images x 300 s VIS = ~7 h

Euclid-Roman Joint Survey

1. Early Euclid survey of Roman fields

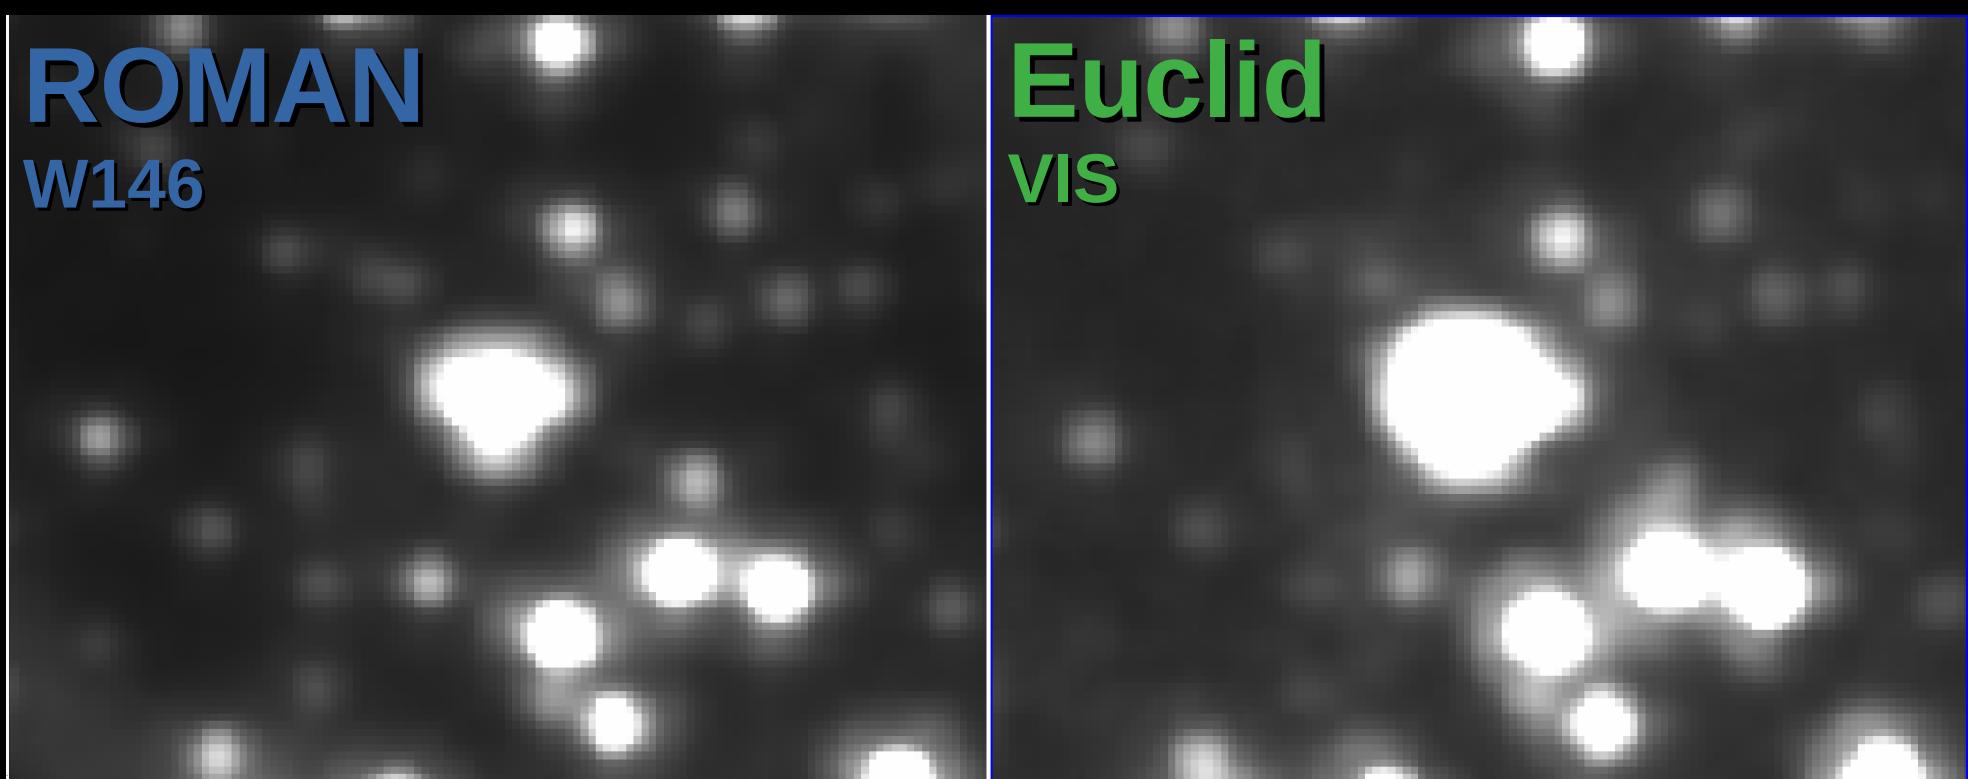

Bachelet et al. A&A under review

Euclid-Roman Joint Survey

Bachelet et al. A&A under review

Euclid-Roman Joint Survey

1. Early Euclid survey of Roman fields

Bachelet et al. A&A under review

Euclid-Roman Joint Survey

1. Early Euclid survey of Roman fields

Bachelet et al. A&A under review

- Constraints from high-resolution for **30,000 events** :
 - source/lens proper motion (>30% of events better than 1mas/yr)
 - source and lens fluxes (>40% of events better than 0.1 mag)
- **Mass and distance measurement** for a large fraction of events **after year 1 of Roman**.

Euclid-Roman Joint Survey

1. Early Euclid survey of Roman fields

Bachelet et al. A&A under review

Measurement of proper motions and flux of the sources and lenses

~ 4 pointing of Roman fields x 16 dithering images x 300 s VIS = ~7 h

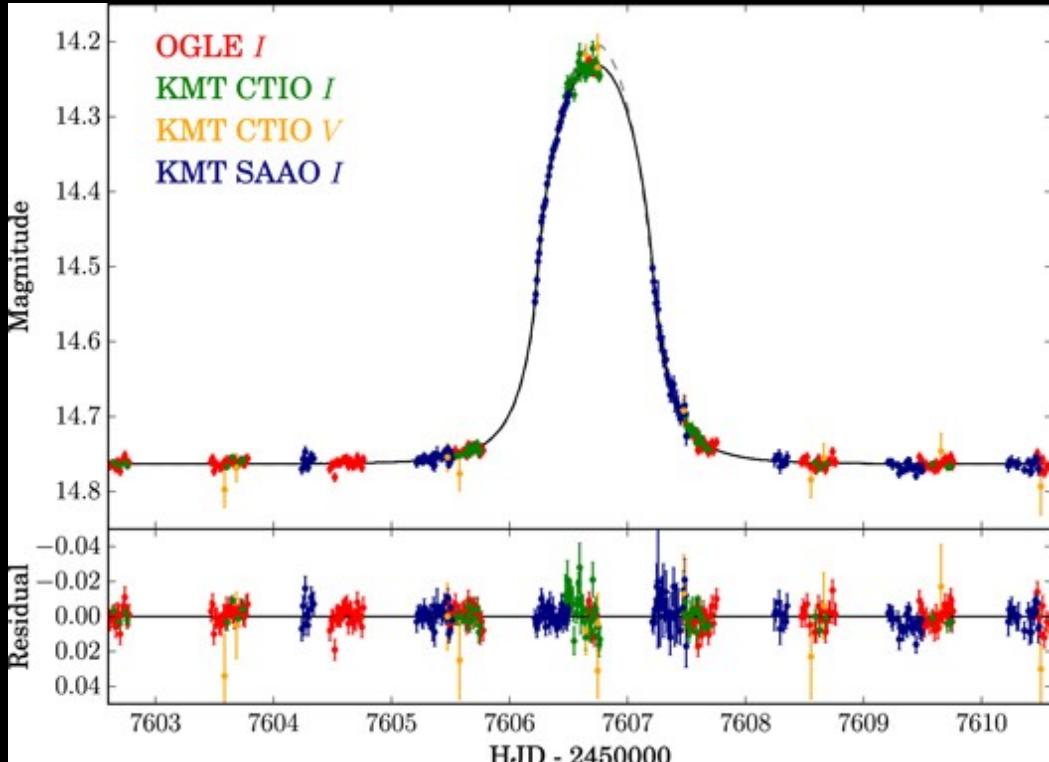

2. Simultaneous Euclid/Roman survey during mission extension

Measure the parallax down to the FFP regime

~ 30 d windows, 30 min cadence, 300 s VIS

Euclid-Roman Joint Survey

2. Simultaneous Euclid/Roman survey during mission extension

Jupiter-mass in the Disk

OR

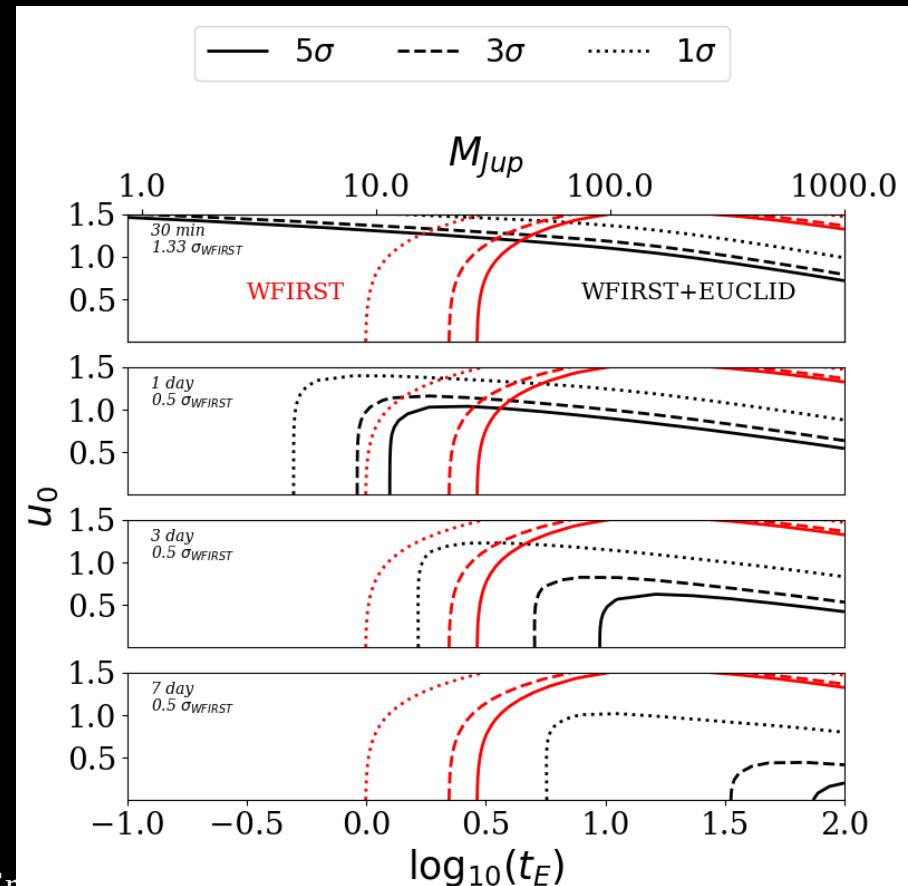

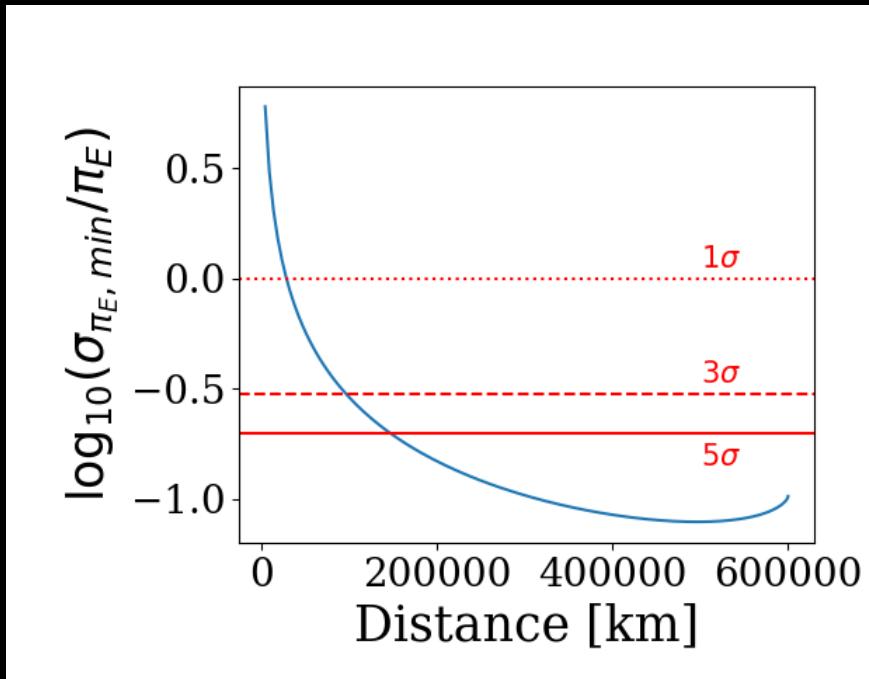

Saturn-mass in the Bulge

Mróz, P. et al, AJ, 2018

Euclid-Roman Joint Survey

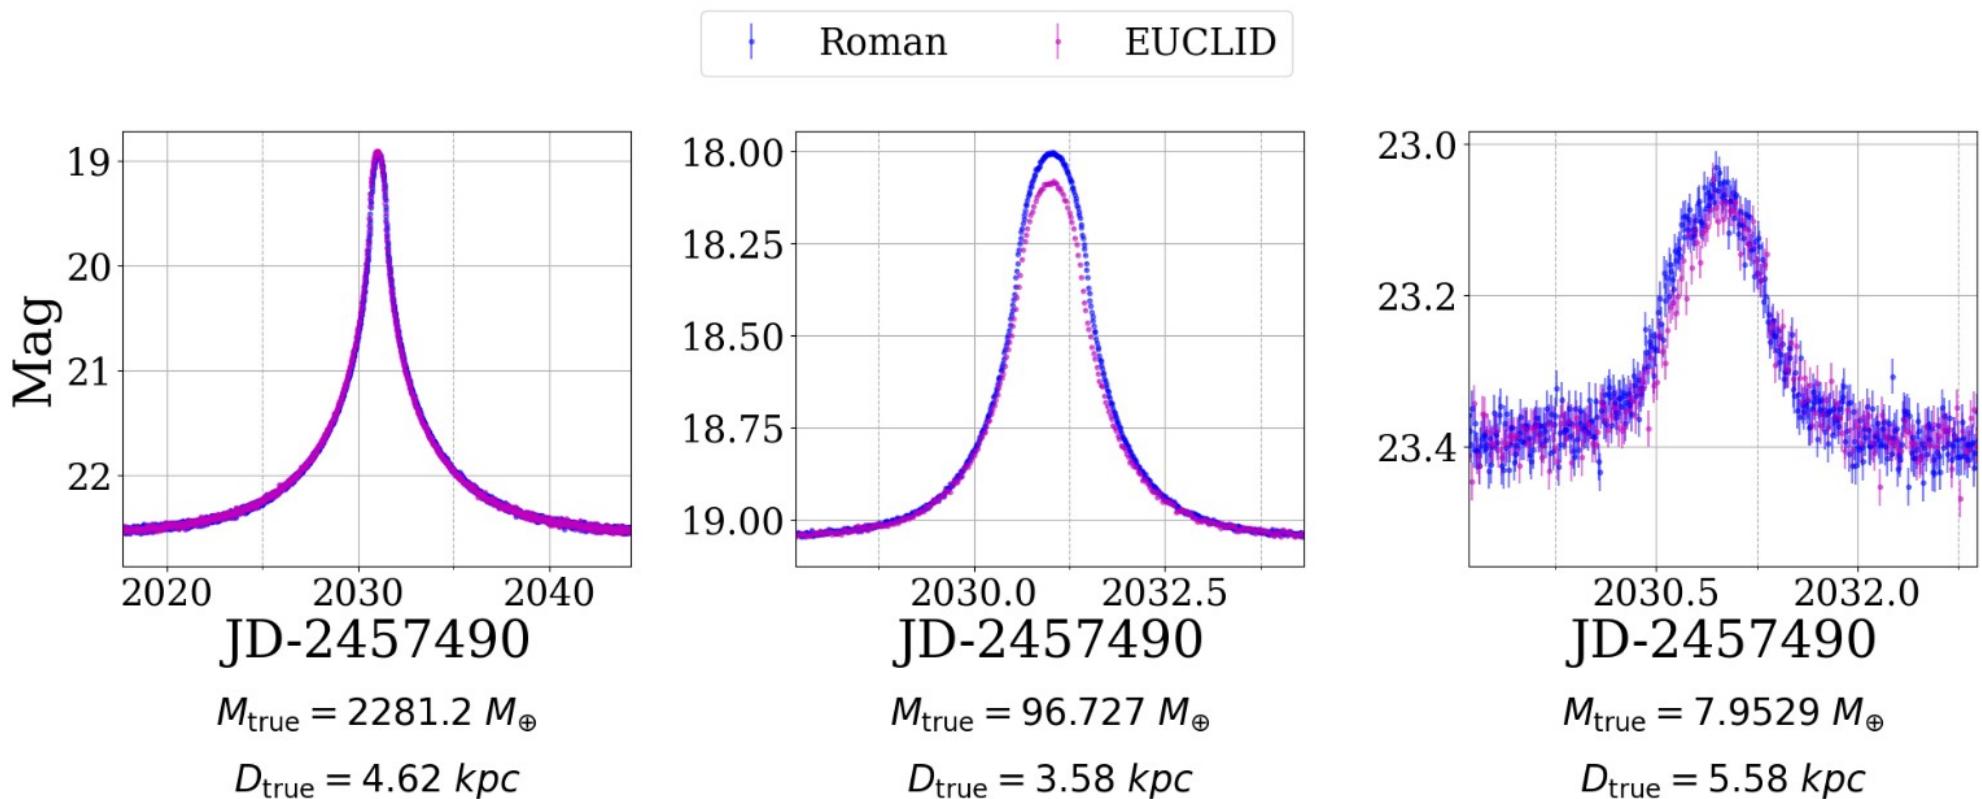

2. Simultaneous Euclid/Roman survey during mission extension

Bachelet and Penny, APJL, 2019

Euclid-Roman Joint Survey

2. Simultaneous Euclid/Roman survey during mission extension

Euclid-Roman Joint Survey

2. Simultaneous Euclid/Roman survey during mission extension

- We simulated $\sim 10^{11}$ unique lens/source pairs with 2 different FFP populations and both with Euclid VIS and H
- Apply several criterion for detection of :
 - the event (S/N)
 - the parallax π_E at 5σ
 - finite source effect

Euclid-Roman Joint Survey

2. Simultaneous Euclid/Roman survey during mission extension

δ Jupiter-mass, 2 FFP per MS

FFP Model	Filter Combination	S/N only	S/N + Parallax	S/N + Finite Source	All Constraints
Sumi (2011)	W146 + VIS	490	450	18	18
	W146 + NISP (H)	490	450	19	19
Mróz (2019)	W146 + VIS	130	110	28	28
	W146 + NISP (H)	130	110	31	31

δ Earth-mass, 10 FFP per MS

Euclid-Roman Joint Survey

2. Simultaneous Euclid/Roman survey during mission extension

FFP Model	Filter Combination	S/N only	S/N + Parallax	S/N + Finite Source	All Constraints
Sumi (2011)	W146 + VIS	490	450	18	18
	W146 + NISP (H)	490	450	19	19
Mróz (2019)	W146 + VIS	130	110	28	28
	W146 + NISP (H)	130	110	31	31

Unique opportunity to measure :

- ~85 % of FFP will have measurement of parallax at 5 σ

Euclid-Roman Joint Survey

2. Simultaneous Euclid/Roman survey during mission extension

FFP Model	Filter Combination	S/N only	S/N + Parallax	S/N + Finite Source	All Constraints
Sumi (2011)	W146 + VIS	490	450	18	18
	W146 + NISP (H)	490	450	19	19
Mróz (2019)	W146 + VIS	130	110	28	28
	W146 + NISP (H)	130	110	31	31

Unique opportunity to measure :

- ~85 % of FFP will have measurement of parallax at 5σ
- mass, distance and kinematics for 20-30 FFP/year

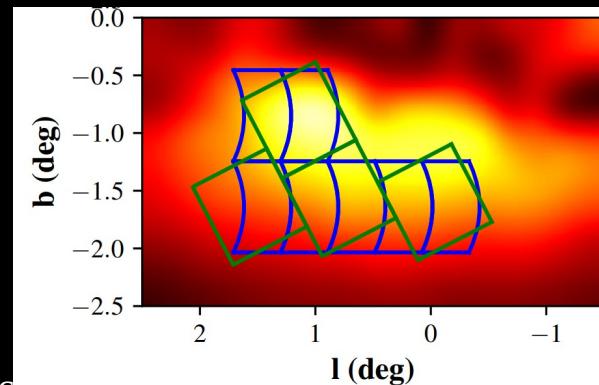

Euclid-Roman Joint Survey: **the masses and distances!**

Euclid-Roman Joint Survey: **the masses and distances!**

1. Early Euclid survey of Roman fields

Bachelet et al. A&A under review

- 4 pointing \times 16 dithering images \times 300s in VIS \sim 7 hours
- Unique constraints on masses and distances of 30,000 events (and 1400 planets), including a large fraction of events after year 1 of Roman.

Euclid-Roman Joint Survey: **the masses and distances!**

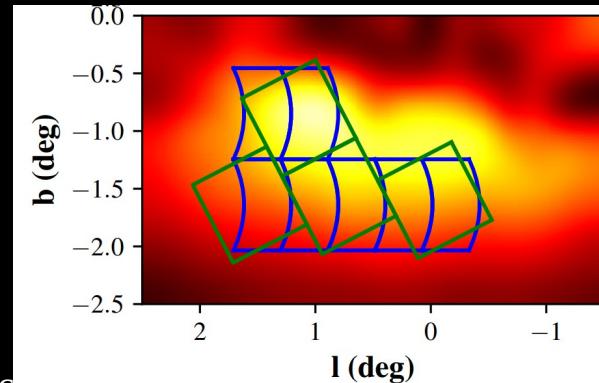

1. Early Euclid survey of Roman fields

Bachelet et al. A&A under review

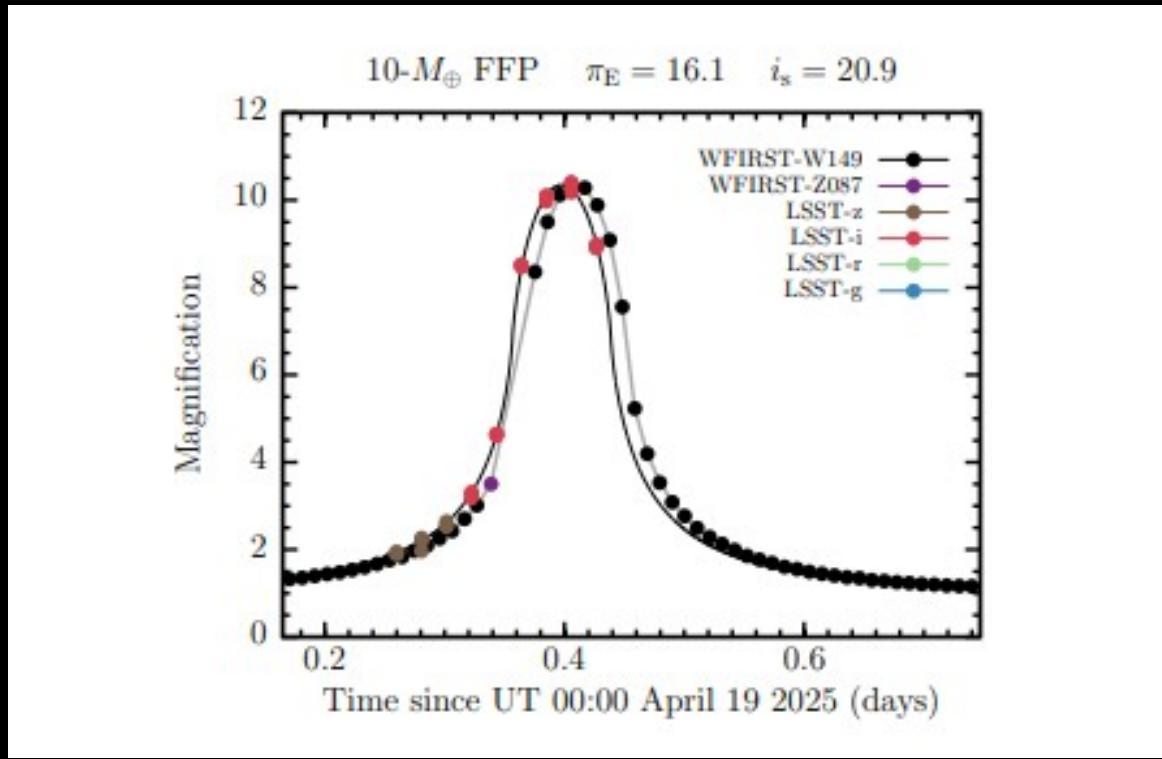

- 4 pointing \times 16 dithering images \times 300s in VIS \sim 7 hours
- Unique constraints on masses and distances of 30,000 events (and 1400 planets), including a large fraction of events after year 1 of Roman.

2. Simultaneous Euclid/Roman survey during mission extension

- \sim 30 d joint survey of the Roman fields
- Parallax detection at 5σ down to the FFP regime
- Mass, distance and kinematics for 20-30 FFP/year

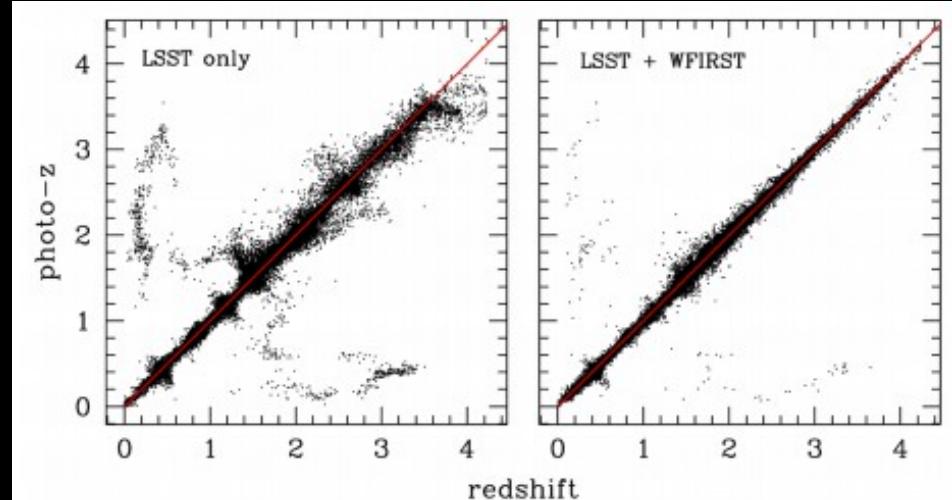

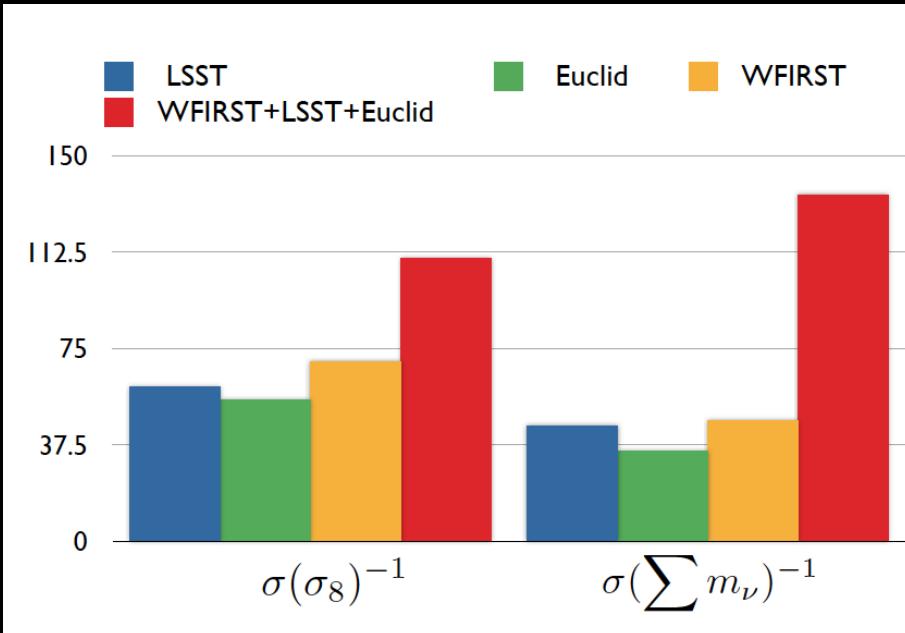

Roman-Rubin parallax of FFP
